Name: Diya Thakur
Registration Number: 25MIB10040
Branch: B.Tech (AI and Bioinformatics)
Year: First Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: (31/03/2026)

)

📘 Introduction

Digital literacy is an essential skill in today's technology-driven world. It enables individuals to effectively use digital tools, communicate responsibly, and stay safe online. As a Student Digital Ambassador, this project aims to spread awareness about digital literacy among peers and develop practical digital skills.

This project consists of five tasks that cover different aspects of digital literacy, including creating an infographic, building a digital portfolio, exploring online platforms, understanding email etiquette, and learning about cybercrime awareness. Each task focuses on real-world applications and helps in developing both technical and communication skills.

Through this project, I gained hands-on experience with various digital tools and learned the importance of responsible online behavior.

🖼️ Task 1 Write-up

In this task, I created a digital literacy awareness infographic using Canva. The purpose of the infographic was to educate students about the importance of digital literacy in a simple and visually appealing way. The infographic includes key topics such as the meaning of digital literacy, useful digital tools for students, safe internet practices, and maintaining a professional online presence.

While designing the infographic, I focused on keeping the content clear, concise, and easy to understand. I used icons, colors , and headings to make the design more engaging. One challenge I faced was selecting the most relevant information and organizing it properly within limited space. However, this helped me improve my creativity and presentation skills.

Overall, this task was interesting as it allowed me to combine creativity with knowledge and understand how visual communication can effectively convey important information.

💼 Task 2 Write-up

In this task, I built my digital portfolio by creating and updating profiles on platforms such as GitHub and LinkedIn. These platforms are widely used by students and professionals to showcase their skills, projects, and achievements.

On GitHub, I created a profile README that includes my basic details such as name, branch, and academic goals. On LinkedIn, I updated my education section with my current degree and university details. I also took screenshots of these profiles and added them to the project repository.

This task helped me understand the importance of maintaining a professional online presence. It also made me realize how these platforms can be useful for networking, internships, and career opportunities in the future.

In the next four years, I plan to actively use these platforms to share my projects, connect with professionals, and build my personal brand.

💻 Task 3 Write-up

In this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level coding challenge. This helped me understand basic problem-solving and logic-building skills.

In addition, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. The form includes both multiple-choice and short-answer questions to test students’ understanding of digital literacy. I also viewed responses through Google Sheets, which helped me understand how data can be collected and analyzed.

This task was useful in learning how online platforms can support academic learning and collaboration. Coding platforms help improve logical thinking, while tools like Google Forms are useful for surveys and quizzes.

Overall, this task improved my technical skills and gave me practical knowledge of tools that can be used in academics.

📧 Task 4 Write-up

In this task, I learned about professional communication through email etiquette. I wrote two emails: one requesting an assignment extension and another applying for a summer internship. Both emails followed proper structure, including subject line, greeting, body, and closing.

I also created a checklist of social media do's and don'ts to promote responsible online behavior among students.

One situation where poor communication can cause problems is when a student sends an email without proper greeting or clear message, which may appear rude or confusing. This can lead to misunderstandings or delayed responses.

This task helped me understand the importance of clarity, politeness, and professionalism in digital communication.

🛡️ Task 5 Write-up

In this task, I explored cybercrime awareness by studying phishing and online payment fraud. I learned how cybercriminals use fake messages, links, and websites to trick users into sharing sensitive information.

What surprised me most was how easily people can fall victim to these scams due to lack of awareness. Even a small mistake, like clicking on a suspicious link, can result in financial loss or identity theft.

As a result of this task, I will be more cautious while using online platforms. I will avoid sharing personal information, verify links before clicking, and use strong passwords.

This task helped me understand the importance of cybersecurity and staying alert in the digital world.

🧠 Conclusion

This project provided me with valuable knowledge and practical experience in digital literacy. I learned how to use digital tools effectively, communicate professionally, and stay safe online. Each task contributed to improving my technical, creative, and communication skills.

The project also helped me understand the importance of maintaining a professional digital presence and being responsible while using online platforms. These skills will be highly useful in my academic journey and future career.

Overall, this project was a great learning experience that enhanced my awareness and confidence in using digital technologies.
